RAJALAKSHMI ENGINEERING COLLEGE

AI23431 - WEBTECHNOLOGY AND MOBILE APPLICATION PROJECT REVIEW

JOB PORTAL SYSTEM

Presented by :

Saradha.S(241501187)

Satya Jit. S(241501192)

Introduction

- Job searching is often time-consuming and unorganized.
- Many platforms lack simplicity and user-friendly design.
- This project focuses on building a clean and responsive job portal UI.
- It demonstrates how users can browse and apply for jobs easily.
- Built entirely using frontend technologies.

Problem Statement

- Complex and cluttered job portals confuse users.
- Poor UI/UX affects user experience.
- No centralized interface for browsing and applying.
- Lack of responsive design for mobile users.

Objectives

- Design a user-friendly job portal interface.
- Provide smooth navigation between pages.
- Display job listings in an organized way.
- Simulate job application process.
- Ensure responsive design for all devices.

System Architecture

Architecture diagram:

User

↓

Frontend (HTML, CSS, JavaScript)

↓

Static Data / Local Storage

Key System Characteristics

- Fully frontend-based application
- Responsive web design
- Simple and intuitive UI
- Fast loading (no server dependency)
- Interactive user experience

Software Requirements

- Web Browser (Chrome / Edge)
- HTML5
- CSS3
- JavaScript
- Code Editor (VS Code)

System Modules

Modules of the System

- Home Page (Job Listings)
- About Section
- Job Categories Section
- Apply Page (Form UI)
- Success Page (Confirmation UI)
- Navigation & UI Components

Key Features

- Responsive design (mobile & desktop)
- Interactive job cards
- Filter & category UI (static/demo)
- Application form interface
- Confirmation message display
- Clean navigation system

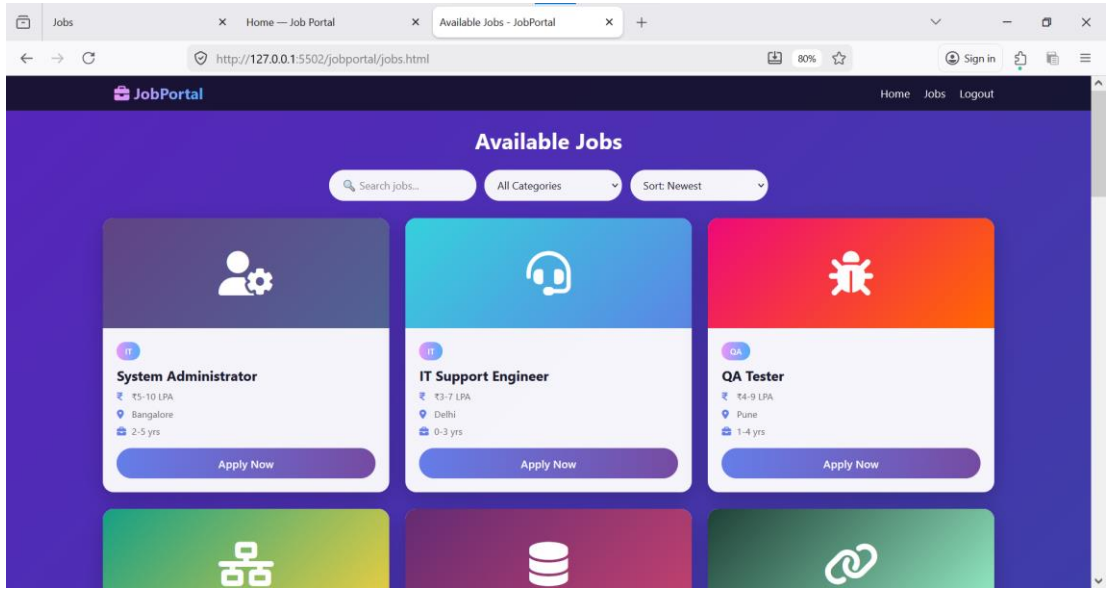
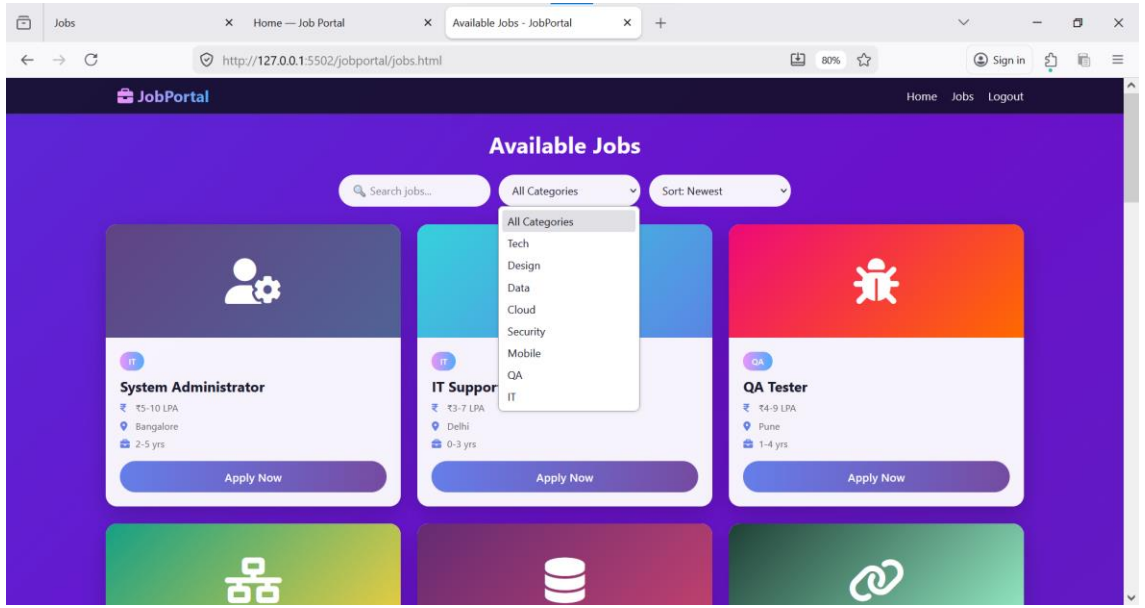
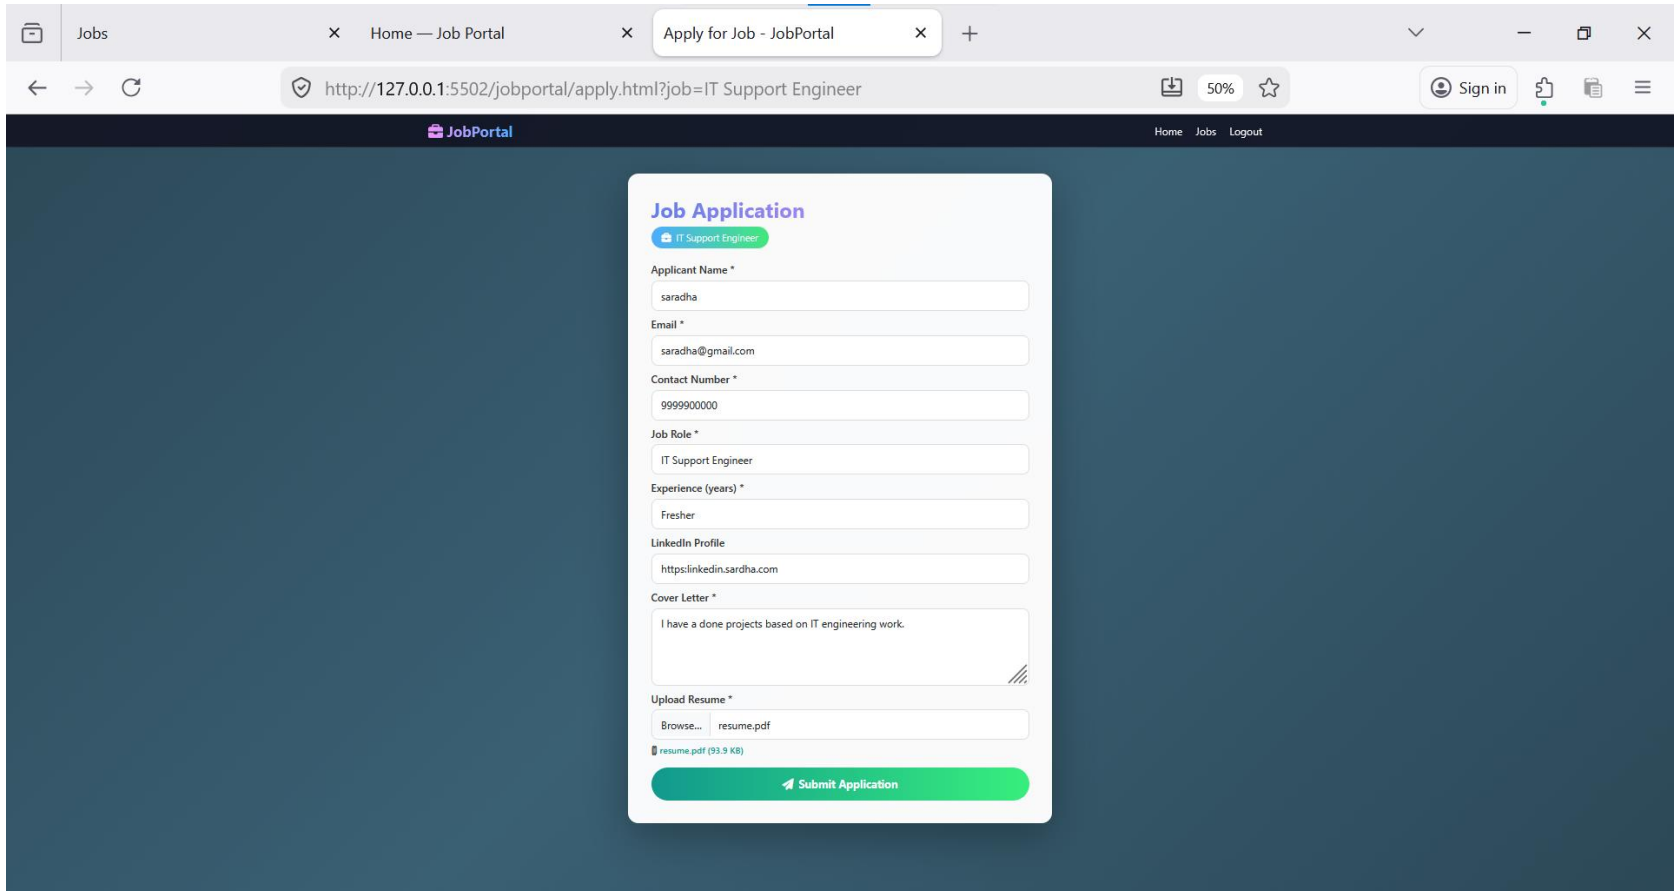
Available jobs:





Job application:



Advantages

- Simple and easy-to-use interface
- Fast and lightweight application
- Works on all devices
- Demonstrates modern UI/UX design
- Good foundation for future backend integration

Results and Conclusion

- A responsive job portal interface is developed successfully.
- Users can navigate and view job listings easily.
- Application flow is demonstrated through UI.
- Project showcases frontend development skills effectively

.

Future Enhancements

- Add backend for real job data storage
- User authentication system
- Real-time job updates
- Email notifications
- Admin dashboard

THANK YOU!!!
